- Does not obstruct vision thanks to its high light transmittance.
- Provides full protection for nose, mouth and eyes.
- Made from hygienic, antibacterial material.
- Provides a very clear viewing angle.
- It never evaporates.

## FACE SHIELD

### FULL PROTECTION

Corona virus is transmitted only through droplets, only through the eyes, nose and mouth. The face shield is the only PPE that covers all contamination (Personal Protective Equipment)

### CONTINUOUS USE

You can not pay once, you can use it repeatedly. The front visor is suitable for chemical sterilization.

### DROPPROOF

It is a mistake to assume that the masks are made of fabric and drip. The face shield is oxygenated, which does not absorb droplets.

### SUPPORTS RESPIRATORY

Masks that are claimed to not transmit the virus suffocate people. The face shield is the only PPE that does not prevent a person from breathing.

### YOU CAN USE EYELOGONO

Suitable for the weather, it gives a wide usage opportunity.

### COMFORTABLE USE

It is a visor with a forehead contact pad covered with an antiperspirant fabric. For long-term use in Face Guard work.
